Model 3434-KuE

Ku-Band Beacon Tracking Receiver

Version 4

A tracking receiver for antenna step tracking and automatic uplink power control with Accu-trac for high frequency drift applications.

The Model 3434-KuE Version 4 is the latest release of our reliable series of 3434 Beacon Receivers. With Version 4 firmware the Model 3434-KuE has an input of **11.7-12.75 GHz******, Digital Level reference setting, Ethernet connectivity with M&C control interface, and power up temperature compensation for rapid signal acquisition. The 3434 series now offers our proprietary *Accu-trac* search and acquire AFC feature with several search bandwidths up to ± 800 kHz. Frequency selection on 10 kHz steps may be accomplished from the front panel or via remote control. Pre-detection noise bandwidth of 50 kHz (or factory option of 25 kHz) facilitates accurate tracking at very low C/N levels for use with either CW or BPSK carriers.

- ★ AFC disable option for wide data carrier applications
- ★ Digital level reference setting, -30 to -90 dBm on 0.5 dB steps
- ★ Accu-trac signal tracking feature for high drift LNB applications with selectable acquisition bandwidths up to ± 800 kHz
- ★ RS-232/422/485 and Ethernet, control interface, all Standard / Front panel selectable
- ★ Dual signal strength output / 2 identical analog outputs for simultaneous antenna tracking and UPC control

The output of the Beacon Receiver is a DC voltage proportional to the input signal level to facilitate both antenna tracking control and automatic power control. A Loss of Carrier indicator is provided in the event the tracking signal is lost. Form "C" relay contacts provide an external Loss of Carrier Alarm. A front panel VFD or SSC GUI (via your computer) displays operating frequency, relative signal level, carrier lock or alarm, and input level.
